

-Home care: rest, fluids, frequent hand hygiene, PRN acetaminophen for pain/fever

-Home Isolation: stay home for at least 10 days after start of symptoms *and* at least 24 hours after no fever without meds *and* after symptoms significantly improved. Repeat testing is not needed to end home isolation or return to work

-Home Contacts: separate yourself from others in your home (i.e separate bathroom, stay as far as possible from others), wear facemask, wash hands often, disinfect high touch areas. Notify all of your close contacts that they are required to be in quarantine due to this exposure for 14 days after their last contact. Close contacts=anyone within 6 feet of infected person for a total of 15 mins or more; anyone with unprotected contact with infected person's body fluids/secretions

-Return precautions: for SOB, confusion, dehydration, chest pain other serious symptoms

Need 20 days isolation if (needed >6L02, VTE, shock, multiorgan dysfunction, on chemo, CD4 < 200, Pred ? 20mg/qday 14+ days)

Close contacts of confirmed COVID-19 cases are required to self-quarantine for 10 days after their last contact with the infectious person. If they remain asymptomatic, after Day 10 they are allowed to discontinue quarantine but should continue to monitor for symptoms up to Day 14.
